# SUMMARY OF FINDINGS

#### Seasonally adjusted

Seasonally adjusted employment in Queensland increased by 29,600 from May 1992 to August 1992 and over the same period the number of persons in the labour force rose by 27,900. For Australia, seasonally adjusted employment increased by 68,600 and the labour force by 110,300 over the 3 months to August 1992.

The unemployment rate in Queensland increased from the May 1992 figure of 10.4 per cent to 11.2 per cent in July 1992 before falling to 10.1 per cent in August 1992. In August 1992, the unemployment rate for Australia was 10.9 per cent.

TABLE 1 — LABOUR FORCE, QUEENSLAND (Seasonally adjusted series)

Particulars	Unit	August 1991	May 1992	June 1992	July 1992	August 1992	Annual percentage change
Employed	'000	1,315.5	1,322.7	1,328.9	1,346.4	1,352.3	+ 2.8

Participation rate	%	63.3	62.9	63.5	64.3	63.6	
Labour force	'000	1,459.4	1,476.0	1,494.7	1,515.9	1,503.9	+ 3.0

#### Trend series

The number of employed Queenslanders increased by 11,000 from May 1992 to August 1992 and the unemployment rate has increased to 10.7 per cent in August 1992, compared with 9.9 per cent in August 1991. The number of employed Australians rose while the unemployment rate has increased from 10.7 in May 1992 to 11.0 per cent in August 1992.

DIAGRAM 1 - EMPLOYED PERSONS: MONTHLY PERCENTAGE CHANGE
(Trend series)

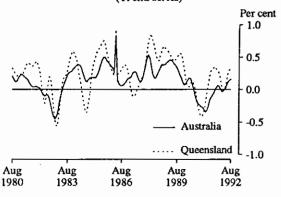

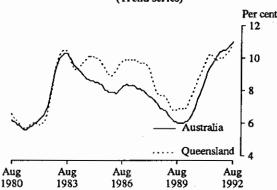

DIAGRAM 2 - UNEMPLOYMENT RATE (Trend series)

#### Regional estimates

The unemployment rate for the Brisbane Statistical Division (BSD) in August 1992 was 8.9 per cent and for the Balance of Queensland 10.3 per cent. The Brisbane City Inner Ring and South and East BSD Balance had the highest unemployment rates in the BSD at 9.5 per cent while the Brisbane City Outer Ring had the lowest rate of 7.7 per cent.

For the Balance of Queensland the region with the highest unemployment rate was North and West Moreton with 13.5 per cent. South and East Moreton recorded a rate of 11.3 per cent followed by Wide Bay-Burnett with 10.5 per cent. Mackay, Fitzroy and Central-West had the lowest unemployment rate of 8.7 per cent.

The labour force participation rate showed a wide variance between regions with the Northern and North-West region having the highest rate of 69.6 per cent contrasting to North and West Moreton with the lowest rate of 58.2 per cent.

#### Youth estimates

The number of 15 to 19 year olds in the Queensland labour force fell slightly to 142,500 persons over the year to August 1992 and the numbers employed decreased by 5,100 (4.4 per cent) to 111,800. The unemployment rate for this group increased from 19.5 per cent in August 1991 to 21.6 per cent in August 1992. The numbers in this age group working full-time and those working part-time decreased marginally over the same period.

# SUMMARY OF FINDINGS — continued

There were 183,200 employed 20 to 24 year olds in August 1992, an increase of 9.4 per cent over the 12 month period. The participation rate of this age group rose from 81.3 per cent in August 1991 to 83.4 per cent in August 1992 and the unemployment rate fell from 15.9 per cent to 13.7 per cent over the same period.

Balance of Queensland	703.4	726.2	+ 3.2	73.7	83.5	+ 13.3
Queensland	1,308.2	1,344.8	+ 2.8	136.6	144.0	+ 5.4

The total number of employed persons in Queensland increased by 2.8 per cent to 1,344,800 in the 12 months to August 1992 and the number of unemployed persons was 144,000, an increase of 5.4 per cent for the 12 month period.

Over the year to August 1992 the manufacturing industry showed an increase in the numbers employed, rising 11,100 (7.4 per cent). However, there was a slight increase in the numbers unemployed within this industry. The numbers employed in the wholesale and retail trade industry increased by 3.7 per cent over the 12 months to August 1992. Both the construction and wholesale and retail trade industries showed drops of 27.9 per cent and 20.7 per cent, respectively, in the number of persons unemployed.

Part-time employment increased by 26,100 (8.5 per cent) between August 1991 and August 1992 while the numbers in full-time employment rose 10,500 to 1,013,100.

# SPECIAL SURVEYS DATA RELATING TO THE LABOUR FORCE

Although emphasis in the population survey is placed on the regular collection of data on demographic and labour force characteristics, supplementary and special surveys of particular aspects of the labour force are carried out from time to time. The results of these surveys on labour force and related topics are published separately as shown below.

Title of publication	Latest Data	Catalogue No.
Alternative Working Arrangements, Australia	September to November 1986	6341.0
Annual and Long Service Leave Taken, Australia	May 1988 to April 1989	6317.0
Career Paths of Persons With Trade Qualifications, Australia	1989	6243.0
Career Paths of Qualified Nurses, Australia	March to July 1989	6277.0
Child Care, Australia	November 1990	4402.0
Employment Benefits, Australia	July 1991	6334.0
How Workers Get Their Training, Australia	1989	6278.0
1990 Survey of Income and Housing Costs and Amenities	1990	6546.0
Job Search Experience of Unemployed Persons, Australia	June 1991	6222.0
Labour Force Experience, Australia	March 1992	6206.0
Labour Force Status and Educational Attainment, Australia	February 1992	6235.0
Labour Force Status and Other Characteristics of Families	June 1991	6224.0
Labour Force Status and Other Characteristics of Migrants, Australia	September 1990	6250.0
Labour Mobility, Australia	February 1992	6209.0
Multiple Jobholding, Australia	July 1991	6216.0
Participation in Education, Australia	September 1991	6272.0
(Formerly Labour Force Status and Educational Attendance, Australia)		
Persons Employed at Home, Australia	April 1989	6275.0
Persons Not in the Labour Force, Australia	September 1991	6220.0
Persons Who Had Re-entered the Labour Force, Australia	May 1990	6264.0
Persons Who Have Left the Labour Force, Australia	April 1991	6267.0
Retirement and Retirement Intentions, Australia	November 1989	6238.0
Successful and Unsuccessful Job Search Experience, Australia	July 1990	6245.0
Superannuation, Australia	November 1991	6319.0
Trade Union Members, Australia	August 1990	6325.0
Transition From Education to Work, Australia	May 1991	6227.0
Underemployed Workers, Australia	May 1991	6265.0
Weekly Earnings of Employees (Distribution), Australia	July 1991	6310.0

Special tabulations of data from these surveys are available. Please contact Mark Chalmers on (07) 222 6068 for further information.

# **CUSTOMISED REPORTS**

Summary reports at the national, State and regional level can be prepared for any aspect of the labour force required, or on any aspect of employment, earnings or industrial conditions. Please contact Mark Chalmers on (07) 222 6068 for details or write to Australian Bureau of Statistics, GPO Box 9817, Brisbane Q 4001.

# RECENT RELEASES OF INTEREST

# Child Care, Australia, November 1990 (4402.0), (\$25.00)

The 1990 issue contains information on children aged 0-11 years and family units with children aged 0-11 years classified by type and usage of child care, number and age of children, days and hours of care, labour force status and birthplace of parents, whether care needs were met or not met and other demographic and economic attributes of the families, children or parents of children.

# Labour Force Experience, Australia, March 1992 (6206.0), (\$12.50)

This publication contains estimates of persons who spent some time in the labour force during the year ending March classified by age and marital status. Information is provided on persons who worked, persons who looked for work and persons not in the labour force during all or part of the period.

# Labour Force Status and Educational Attainment, Australia, February 1992 (6235.0), (\$12.50)

Information is provided for the civilian population aged 15 to 69, their educational attainment classified by labour force status and age. For persons with post-school qualifications, the information includes their main field of study, the year and country in which they obtained their qualification, and for those who did not complete their schooling it includes the age at which they left school. For employed persons, information includes occupation and industry. Duration of current period of unemployment and unemployment rates are shown for unemployed persons.

# Labour Mobility, Australia, February 1992 (6209.0), (\$12.50)

Contains estimates of persons who worked at some time during the year ending February and were employed for less than twelve months in job held at the end of the period or left a job in the period. Classifications are: number of employers or businesses worked for in the period, sex, age, industry, occupation, educational attainment, marital status, status of worker, labour mobility, change in occupation and industry, duration of job left.

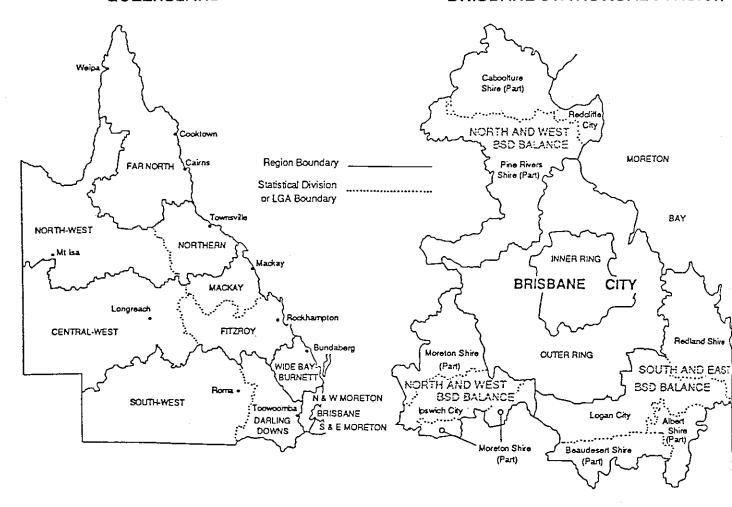

#### Superannuation, Australia, November 1991 (6319.0) (\$12.00)

This publication provides details of persons who currently belong to a superannuation scheme. Some details of persons who once belonged to a superannuation scheme are also provided. The type of data items provided include: State and Territory, age, sex, full-time/part-time status, weekly contributions to scheme, whether belong to more than one scheme, provider of scheme and time in superannuation scheme.

Please contact Mark Chalmers, in the Social Analysis Subsection on (07) 222 6068 for further information.

#### **EXPLANATORY NOTES**

#### The population survey

The survey is based on a multi-stage area sample of private dwellings and non-private dwellings (hotels, motels, etc.) and usually covers slightly more than three-fifths of 1 per cent of the population of Queensland. The information is obtained from the occupants of selected dwellings by carefully chosen and specially trained interviewers. The interviews are generally conducted during a period of 2 weeks beginning on the Monday between the 6th and 12th of each month. The information obtained relates to the week before the interview (i.e. the reference week).

#### Scope

- 2. The labour force survey includes all persons aged 15 years and over except:
  - (a) members of the permanent defence forces;
  - (b) certain diplomatic personnel of overseas governments, customarily excluded from Census and estimated populations;
  - (c) overseas residents in Australia and
  - (d) members of non-Australian defence forces (and their dependants) stationed in Australia.

#### Coverage

- 3. In the labour force survey, coverage rules are applied which aim to ensure that each person is associated with only one dwelling and hence has only one chance of selection. The coverage rules are, necessarily, a balance between theoretical and operational considerations. Nevertheless, the chance of a person being enumerated at two separate dwellings in the one survey is considered to be negligible.
- 4. Persons who are away from their usual residence for 6 weeks or less at the time of interview are enumerated at their usual residence when relevant information can be obtained from other usual residents present at the time of the survey.

#### Supplementary and special surveys

5. Emphasis in the population survey is placed on the regular collection of specific data on demographic and labour force characteristics of the population. However, supplementary and special surveys of particular aspects of the labour force or of other subjects are carried out from time to time. Statistics from these surveys are published and are available on request. A list of survey publications on labour force and related topics is shown on page 22.

#### Population benchmarks

- 6. Labour force survey estimates of persons employed, unemployed and not in the labour force are calculated in such a way as to add up to the independently estimated distribution of the population aged 15 years and over by age and sex. This procedure compensates for under-enumeration in the survey and leads to more reliable estimates. The independent population statistics (benchmarks) are the latest available estimates at the time the labour force survey is conducted, but they usually differ from the official population estimates subsequently published in the quarterly ABS publication Australian Demographic Statistics (3101.0) because they are necessarily derived from incomplete information about population changes.
- 7. Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.
- 8. While this procedure can be expected to provide reliable estimates of unemployment and participation rates, it cannot be taken as completely reliable for estimates of numbers involved. For this reason estimates of numbers in each region have not been added to provide an estimate of the total civilian population aged 15 years and over.

#### Revision of series

- 9. Survey estimates are not revised for the usually small amendments of population benchmarks arising from new data on deaths and overseas and internal migration. Revisions are made, however, after each census of population and housing and when population estimation bases are reviewed. These revisions affect unadjusted, seasonally adjusted and trend estimates. The last such revision was made in February 1989 to take account of the results of the 1986 Census of Population and Housing. This affected all the monthly estimates from January 1984 to January 1989.
- 10. From September 1987, regional estimates were based on statistical regions. Prior to September 1987, estimates were based on differently composed dissemination regions.
- 11. The estimates shown in this publication are based entirely on place of usual residence. Prior to October 1982, the estimates are based on a combination of place of enumeration and place of usual residence.
- 12. Until February 1978, surveys were conducted in February, May, August and November each year from 1964. From February 1978 the survey has been conducted on a monthly basis.

#### **EXPLANATORY NOTES** — continued

#### Revision of series — continued

13. The questionnaire used in the survey for the collection of labour force data has been revised a number of times. Details of these changes have been published in *Information Paper: Questionnaires Used in the Labour Force Survey* (6232.0) in March 1978, December 1981, August 1984, June 1986 and June 1991.

#### Comparability of series

- 14. As noted in paragraph 9, estimates from January 1984 have been revised to conform to revised population estimates following the 1986 Census of Population and Housing and are thus not strictly comparable with estimates for periods prior to January 1984 which have not been revised.
- 15. Regional estimates were based on statistical regions from September 1987. They are not comparable to estimates prior to that date which were based on differently composed dissemination regions.
- 16. Comparability with estimates produced from the quarterly survey of employment and earnings is affected by the use of a different survey methodology and definitions. The labour force survey provides estimates of people in jobs whereas the survey of employment and earnings provides an estimate of the number of jobs held by wage and salary earners. A more detailed description of the differences between these two series is provided in Information Paper: Comparison of Employment Estimates from the Labour Force Survey and the Survey of Employment and Earnings (6263.0).

#### Reliability of estimates

- 17. Estimates in this publication are subject to two sources of error.
  - (a) Sampling error. Since the estimates are based on information obtained from occupants of a sample of dwellings they, and the movements derived from them, may differ from the figures that would have been produced if all dwellings had been included in the survey. More information on this topic is given in the Technical Notes.
  - (b) Non-sampling error. Inaccuracies may occur because of imperfections in reporting by respondents and interviewers and errors made in coding and processing data. These inaccuracies may occur in any enumeration, whether it be a full count or a sample. Every effort is made to reduce the non-sampling error to a minimum by careful design of questionnaires, intensive training and supervision of interviewers and efficient operating procedures.

### Survey sample redesign

- 18. The labour force survey sample has been redesigned and reselected using information collected in the 1986 Census of Population and Housing. The new sample was phased in over the period September to December 1987. For details, see *Information Paper: Labour Force Survey—Sample Design* (6269.0).
- 19. The sampling fraction differs for States and Territories to enable estimates of reasonable accuracy to be produced at State level as well as for Australia. The sampling fraction for Queensland is 1 in 160.

#### Seasonal adjustment

20. Seasonal adjustment is a means of removing the estimated effects of normal seasonal variation from the series so that the effect of other influences on the series can be more clearly recognised. Seasonal adjustment does not remove the irregular or non-seasonal influences which may be present in any particular month. Influences that are volatile can still make it difficult to interpret the movement of the series even after adjustment for seasonal variation. Seasonal factors are reviewed annually to take account of each additional year of original data.

#### Trend estimation

- 21. Smoothed seasonally adjusted series produce a measure of trend by reducing the impact of the irregular component of the series. The trend estimates are derived by applying a 13-term Henderson-weighted moving average to the respective seasonally adjusted series. These trend series are used to analyse the underlying behaviour of the series over time.
- 22. While this smoothing technique enables estimates to be produced which include the latest month, it does result in revisions to the most recent months as additional observations become available. Generally, subsequent revisions become smaller and after 3 months have a negligible impact on the series. There will also be revisions as a result of the annual review of seasonal factors.

#### Month-to-month movements

23. Care should be taken in the interpretation of month-to-month movements in labour force survey estimates as they are subject to sampling and non-sampling variability as explained in paragraph 17.

28. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products* (1101.0). The ABS also issues the *Publications Advice* (1105.0) on Tuesdays and Fridays which lists publications to be released in the next few days. Both the Catalogue and the *Publications Advice* are available from any ABS office.

# Unpublished statistics

29. As well as the statistics included in this and related publications, the ABS may have other relevant unpublished data available. Inquiries should be made to the contact shown at the front of this publication.

#### Symbols and other usages

- .. not applicable
- \* subject to sampling variability too high for most practical purposes; See paragraphs 8 and 9 in the Technical Notes
- 30. Where figures have been rounded, discrepancies may occur between totals and the sums of the component items.

#### **TECHNICAL NOTES**

#### Estimation procedure

The labour force estimates are derived from the monthly population survey by use of a complex ratio estimation procedure, which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself. This procedure compensates for under-enumeration in the survey and leads to more reliable estimates.

Since regular estimates of the population are not available at the regional level, the State benchmarks were used to produce regional estimates. This methodology assumes a common pattern of under-enumeration at the regional level and also ensures that regional estimates add to the State totals.

#### Data quality

Two types of error are possible in an estimate based on a sample survey; sampling error and nonsampling error. Non-sampling error is explained in the Explanatory Notes, paragraph 17(b). The sampling error is a measure of the variability that occurs by chance because a sample, rather than the entire population, is surveyed.

#### Standard error of estimates

- One measure of the variability of estimates which occurs as a result of surveying only a sample of the population is the *standard error* (SE).
- There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included and about 19 chances in 20 that the difference will be less than two standard errors.
- The standard error of an estimate can be obtained from Table A. Linear interpolation should be used to calculate the standard error of estimates falling between the sizes of estimates listed in the table (see example following Table A).
- Standard errors for some estimates, e.g. unemployment, can vary from those shown in the tables.

Methods for calculating the standard errors of these estimates are shown in the table below.

#### Relative standard error

- Another measure of sampling variability is the relative standard error (RSE). This is obtained by expressing the standard error as a percentage of the estimate to which it refers. The relative standard error is a useful measure in that it provides an immediate indication of the percentage errors likely to have occurred due to sampling and thus avoids the need to refer also to the size of the estimate.
- In the tables in this publication, only estimates with relative standard errors of 25 per cent or less, and percentages based on such estimates, are considered sufficiently reliable for most purposes. However, estimates and percentages with larger relative standard errors have been included and are preceded by an asterisk (e.g. \* 3.0) to indicate they are subject to high standard errors and should be used with caution. Small estimates are subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable use.

#### Standard error of movement

- The movement in the level of an estimate is also subject to sampling variability. The standard error of the movement depends on the levels of the estimates from which the movement is obtained rather than the size of the movement. Standard errors of monthly movements are given in Table B. These estimates apply only to estimates of movements between two consecutive months.
- Movements between corresponding months of 11 consecutive quarters, i.e. quarterly movements, can be obtained by multiplying the figure in Table B by 1.11. Standard errors of movements between corresponding months of consecutive years, i.e. annual movements, can be obtained by multiplying the figures in Table A by 1.3. When using Tables A or B to calculate standard errors of movements, refer to the larger of the two estimates from which the movement is derived.

#### METHODS FOR CALCULATING THE STANDARD ERRORS FOR SELECTED ESTIMATES

#### Measure of reliability to be determined

Standard errors of estimates of employed persons.

Standard errors of estimates of unemployed persons.

Standard errors of estimates of persons not in the labour force.

Standard errors of rates (e.g. the unemployment rate which is based on the number of unemployed persons expressed as a percentage of the number of persons in the labour force).

Standard error of average hours worked.

Standard error of median duration of unemployment.

Standard error of monthly movements. Standard error of quarterly movements.

Standard error of annual movements.

#### Method

Determine the SE from Table A directly.

Multiply the SE from Table A by 0.97.

Multiply the SE from Table A by 1.06.

Determine the RSE of the numerator (x) and the denominator (y) then apply the following formula.

RSE  $(x/y) = \sqrt{[RSE(x)]^2 - [RSE(y)]^2}$ Determine the RSE for the number of persons on which the average is based and multiply this by 0.7.

Determine the RSE for the number of persons on which the median is based and multiply this by 2.0.

Using Table B, look up the SE of the larger estimate.

Determine the standard error of the larger estimate (using Table A) and multiply this by 1.11.

Determine the standard error of the larger estimate (using Table A) and multiply this by 1.3.

#### TECHNICAL NOTES - continued

# Linear interpolation

- 12. Linear interpolation is used to determine the standard error of an estimate which falls between two values listed in the *size of estimate* column in Tables A or B. Linear interpolation is best described using an example. In February 1992 there were  $553,500~(X_e)$  employed females in Queensland. This estimate falls between the values  $500,000~(X_l)$  and  $1,000,000~(X_u)$  in Table A.
- 13. The standard error of the estimate is determined as follows:

Firstly calculate 
$$F = \frac{X_e - X_1}{X_u - X_1}$$
  
=  $\frac{553,500 - 500,000}{1,000,000 - 500,000}$   
= 0.107

Secondly, calculate the standard error of the estimate,  $SE(X_e)$  thus,

$$SE(X_e)$$
 =  $SE(X_1) + F[SE(X_u) - SE(X_1)]$   
=  $6,300 + 0.107 \times [8,100 - 6,300]$   
=  $6,493$   
=  $6,500$  rounding to the nearest 100.

Therefore the standard error of the number of employed females in Queensland in February 1992 (553,500) is 6,500.

#### **GLOSSARY**

Attending school. Persons aged 15 to 19 years who, during the reference week, were enrolled full-time at secondary or high schools.

Attending tertiary educational institution full-time. Persons aged 15 to 24 years who, during the reference week, were enrolled full-time at universities, colleges of advanced education, technical colleges, colleges of technical and further education and theological colleges.

Average hours worked. Aggregate hours worked by a group divided by the number of persons in that group.

Average duration of unemployment. For a group of unemployed persons, the aggregate duration of unemployment divided by the number of persons in the group.

Duration of unemployment. The period from the time a person began looking for work or was stood down, to the end of the reference week. Thus the survey measures current (and continuing) periods of unemployment rather than completed spells. For persons who may have begun looking for work while still employed, the duration of unemployment is defined as the period from the time the person last worked full-time for 2 weeks or more to the end of the reference week.

Employed. Persons aged 15 years and over who, during the reference week:

- (a) worked for 1 hour or more for pay, profit, commission or payment in kind in a job or business or on a farm (comprising employees, employers and self-employed persons);
- (b) worked for 1 hour or more without pay in a family business or on a farm (i.e. unpaid family helpers);
- (c) were employees who had a job but were not at work and were: on paid leave; on leave without pay for less than 4 weeks up to the end of the reference week; stood down without pay because of bad weather or plant breakdown at their place of employment for less than 4 weeks up to the end of the reference week; on strike or locked out; on workers' compensation and expected to be returning to their job; receiving wages or salary while undertaking full-time study or
- (d) were employers, self-employed persons or unpaid family helpers who had a job, business or farm, but were not at work.

Former workers. Unemployed persons who have previously worked full-time for 2 weeks or more but not in the past 2 years.

Full-time workers. Employed persons who usually worked 35 hours or more a week (in all jobs) and others who, although usually working less than 35 hours a week, worked 35 hours or more during the reference week.

Hours worked. The total number of hours a group of employed persons has actually worked during the reference week, not necessarily hours paid for.

Job leavers. Unemployed persons who have worked full-time for 2 weeks or more in the past 2 years and left that job voluntarily, that is, because of unsatisfactory work arrangements, pay or hours; the job was seasonal, temporary or a holiday job and they left that job to return to studies; their last job was running their own business and they closed down or sold that business for reasons other than financial difficulties or any other reasons.

Job losers. Unemployed persons who have worked fultime for 2 weeks or more in the past 2 years and left that job involuntarily, that is, were laid off or retrenched from that job; left that job because of their own ill-health or injury; the job was seasonal or temporary and they did not leave that job to return to studies or their last job was running their own business and the business closed down because of financial difficulties.

Industry. Classified according to the Australian Standard Industrial Classification (ASIC), 1983 (1201.0 and 1202.0).

Labour force. For any group, persons who were employed or unemployed, as defined.

Labour force status. A classification of the civilian population aged 15 years and over into employed, unemployed or not in the labour force, as defined. The definitions conform closely to the international standard definitions adopted by the International Conferences of Labour Statisticians.

Marital status. Persons are classified as married (husband and wife) if they are reported as being married (including de facto) and their spouse was a usual resident of the household at the time of the survey. The not married category comprises persons who have never married, or are separated, widowed or divorced, as well as those who, although reported as being married, did not have a spouse who usually lived in the household.

Median duration of unemployment. The duration which divides unemployed persons into two equal groups, one comprising persons whose duration of unemployment is above the median and the other, persons whose duration is below it.

Not in the labour force. Persons who were not in the categories employed or unemployed, as defined. They include persons who were keeping house (unpaid), retired, voluntarily inactive, permanently unable to work, persons in institutions (hospitals, jails, sanatoriums, etc.), trainee teachers, members of contemplative religious orders and persons whose only activity during the reference week was jury service or unpaid voluntary work for a charitable organisation.

Occupation. Classified according to the Australian Standard Classification of Occupations (ASCO), 1986 (1222.0).

#### GLOSSARY - continued

Participation rate. For any group, the labour force expressed as a percentage of the civilian population aged 15 years and over in the same group. Participation rates for persons classified by birthplace are calculated using population estimates which exclude those in institutions. Participation rates for persons classified by school or tertiary educational institution attendance are calculated using population estimates which include those in institutions.

Part-time workers. Employed persons who usually worked less than 35 hours a week and who did so during the reference week.

Seasonally adjusted series. A time series of estimates with the estimated effects of normal seasonal variation removed. See paragraph 20 of the Explanatory Notes for more detail.

Statistical regions. Classified according to the Australian Standard Geographical Classification (ASGC), Edition 8 (2616.0).

Status of worker. Employed persons classified by whether they were employers, self-employed persons, wage and salary earners (employees), or unpaid family helpers.

Trend series. A smoothed seasonally adjusted series of estimates. See paragraphs 21 and 22 of the Explanatory Notes for more detail.

*Unemployed.* Persons aged 15 years and over who were not employed during the reference week and:

(a) had actively looked for full-time or part-time work at any time in the 4 weeks up to the end of the reference week and:

- (i) were available for work in the reference week or would have been available except for temporary illness (i.e. lasting for less than 4 weeks to the end of the reference week);
- (ii) were waiting to start a new job within 4 weeks from the end of the reference week and would have started in the reference week if the job had been available then or
- (b) were waiting to be called back to a full-time or part-time job from which they had been stood down without pay for less than 4 weeks up to the end of the reference week (including the whole of the reference week) for reasons others than bad weather or plant breakdown.

Unemployed persons classified by industry and occupation. Unemployed persons who had worked fultime for 2 weeks or more in the last 2 years are classified according to the industry and occupation of their most recent full-time job.

Unemployed looking for full-time work. Unemployed persons who actively looked for full-time work or were to resume a full-time job, from which they had been stood down.

Unemployed looking for part-time work. Unemployed persons who had actively looked for part-time work only or were to resume a part-time job, from which they had been stood down.

Unemployment rate. For any group, the number of unemployed persons expressed as a percentage of the labour force in the same group.
